ABOUT THIS REPORT	52

EXECUTIVE SUMMARY

The Landzille Growth Intelligence Index (LGII) is Landzille LLC's proprietary system for scoring, ranking, and forecasting land wealth potential across every city, county, and corridor in North Texas. This report operationalizes the LGII vision into a working analytical system: fully specified scoring rubrics for all ten core pillars plus the new eleventh layer (AI Infrastructure Readiness), a tested formula with worked examples, and real scores computed for the seven major growth corridors and twenty-five leading cities identified in *DFW Growth Corridors*.

Four things distinguish this report from a conventional market study. First, it is a **methodology**, not a snapshot — every score is traceable to a documented rubric so it can be recomputed as new data arrives. Second, it is **applied**, not theoretical — real 2026 data on infrastructure spend, employment, population, and land pricing has been scored against the rubric to produce an actual Top 25 Buy Now list, corridor rankings, and inaugural awards. Third, it introduces **LGII 2.0**, an AI Infrastructure Readiness layer that scores every market's fitness for the data-center and AI-compute demand wave now sweeping North Texas — a demand source institutional land buyers are only beginning to price. Fourth, it lays out the **platform roadmap**: the specific path from this spreadsheet-and-report system to a subscription software product Landzille can sell to investors, brokers, and institutions.

The headline findings: **US-75** and the **Dallas North Tollway** remain the two highest-scoring corridors in North Texas, but **I-30 East** has jumped the rankings on the strength of a single discovery — an \$18.7 billion, 3-gigawatt AI data center campus now under construction in Sulphur Springs, one of the largest such projects in North America and sitting almost exactly on the corridor this report already flagged as an emerging opportunity. **Gunter** remains the single highest-conviction city in the system, combining a mapped Tollway extension, a funded Oncor transmission upgrade, and agricultural-basis pricing. Grayson County is the 2026 County of the Year, and the inaugural Landzille Growth Champion is **Sherman**, the only market in North Texas currently scoring in the top tier on both the core LGII and the new AI Infrastructure Readiness index.

PART ONE: THE SYSTEM

WHY LGII EXISTS

A land investment thesis lives or dies on repeatability. Landzille's founding insight — buy ahead of funded infrastructure, in the path of population growth, at a basis agriculture can carry — is sound, but applied inconsistently it produces inconsistent results. The LGII exists to make that thesis mechanical: a documented, weighted, auditable scoring system that turns "this feels like the next Celina" into a number any team member, investor, or future software user can verify and defend.

The Index also solves a second, quieter problem. Landzille's edge is informational: knowing which county just got an Oncor transmission upgrade, which small town just landed a data-center lease, which highway interchange just moved from "planned" to "funded."

That knowledge currently lives in research notes and institutional memory. The LGII gives it a permanent home — a living database that compounds in value every quarter it is maintained, and that becomes genuinely difficult for a competitor to replicate because it is not one insight but the accumulated weight of hundreds of tracked data points scored consistently over years.

THE RATING SCALE

Every market — city, county, or corridor — receives a composite LGII score from 0 to 100, translated into an investment-grade rating.

Score	Rating	Investment Meaning
95–100	Diamond Corridor	Acquire aggressively; thesis is fully confirmed and funded
90–94	Platinum	Exceptional opportunity; enter at scale
85–89	Gold	Strong long-term investment; core portfolio position
80–84	Silver	Above-average growth; selective acquisition
75–79	Bronze	Watch closely; small positions or options
65–74	Emerging	Selective acquisitions only; verify catalysts before committing
Below 65	Speculative	Monitor only; revisit annually

A score is a snapshot, not a guarantee — every rating in this report carries the same disclaimer as the underlying data: verify current figures before transacting, and treat the LGII as a decision-support tool, not a substitute for site-specific due diligence.

THE TEN CORE PILLARS

Each pillar is scored on its own point scale (which equals its weight in the 100-point composite), using the sub-metric rubric below. Sub-metrics are scored 0–2, 0–3, or 0–5 depending on how many distinguishing gradations the metric supports, then summed and capped at the pillar maximum.

1. INFRASTRUCTURE INTELLIGENCE — 20 POINTS

The single heaviest-weighted pillar, because funded infrastructure is the most reliable predictor of appreciation timing in this market.

Sub-metric	Points	Scoring rule
Highway/tollway project stage	0–6	0 = none planned; 2 = in regional plan; 4 = funded/design; 6 = under construction or complete within 3 years
Interchange or direct-access project	0–4	0 = none; 2 = studied; 4 = funded or built
Airport investment nearby	0–2	0 = none; 1 = general aviation upgrade; 2 = commercial service expansion
Rail/logistics investment	0–3	0 = none; 1.5 = proposed; 3 = under construction/operating
Water/utility infrastructure (new supply, plant, or line extension)	0–3	0 = none; 1.5 = planned; 3 = funded/under construction
Broadband/fiber buildout	0–2	0 = <50% coverage, no project; 1 = project underway; 2 = near-complete or complete

2. ECONOMIC INTELLIGENCE — 15 POINTS

Sub-metric	Points	Scoring rule
Anchor employer investment (\$ and jobs)	0–6	0 = none; 2 = <\$100M/local; 4 = \$100M–\$1B; 6 = \$1B+ mega-project
Industrial/distribution pipeline	0–3	0 = none; 1.5 = one project; 3 = multiple active projects
Healthcare/education expansion	0–2	0 = none; 1 = planned; 2 = under construction/open
EDC activity and incentive velocity	0–2	0 = inactive; 1 = moderate; 2 = high (frequent incentive agreements)
Employment diversification	0–2	0 = single-industry dependent; 1 = 2–3 sectors; 2 = broadly diversified

3. POPULATION INTELLIGENCE — 10 POINTS

Sub-metric	Points	Scoring rule
5-year population CAGR	0–4	0 = <1%; 1 = 1–3%; 2.5 = 3–6%; 4 = 6%+
Household formation / building permits trend	0–3	0 = declining; 1.5 = flat/modest; 3 = strong and accelerating
Net migration	0–2	0 = net outflow; 1 = flat; 2 = strong net inflow
Median household income trend	0–1	0 = declining; 0.5 = flat; 1 = rising

4. LAND ECONOMICS INTELLIGENCE — 10 POINTS

Deliberately structured so cheap-but-catalyzed land scores as well as or better than expensive-but-mature land — this pillar rewards upside, not price level.

Sub-metric	Points	Scoring rule
Basis vs. corridor-adjacent comparable	0–4	0 = at or above comparable; 2 = 25–50% discount; 4 = 50%+ discount to the next-hotter town on the same corridor
Historical appreciation trend (5-yr)	0–3	0 = flat/declining; 1.5 = moderate; 3 = strong and accelerating
Large-tract (100+ ac) supply/liquidity	0–2	0 = fragmented/scarce; 1 = moderate; 2 = ample assemblable supply
Transaction volume/market liquidity	0–1	0 = thin/illiquid; 0.5 = moderate; 1 = active, verifiable comps

5. DEVELOPMENT READINESS — 10 POINTS

Sub-metric	Points	Scoring rule
Water/CCN capacity	0–3	0 = no service, no plan; 1.5 = CCN exists, capacity constrained; 3 = confirmed capacity or expansion funded
Sewer capacity/proximity	0–2	0 = none within 5 mi; 1 = within 5 mi; 2 = adjacent/available
Electric (3-phase) availability	0–2	0 = not available; 1 = available with upgrade; 2 = available now

Sub-metric	Points	Scoring rule
Road frontage/access quality	0–2	0 = landlocked; 1 = FM/county road; 2 = state highway/interstate frontage
Soil/floodplain constraint severity	0–1	0 = severe (>40% floodplain or poor soils); 0.5 = moderate; 1 = minimal

6. REGULATORY INTELLIGENCE — 10 POINTS

Higher score = lower approval friction.

Sub-metric	Points	Scoring rule
ETJ/annexation posture	0–3	0 = aggressive, unfavorable city posture; 1.5 = neutral; 3 = favorable/negotiable, or SB 2038 release available
Zoning/platting complexity	0–3	0 = restrictive, slow; 1.5 = standard; 3 = streamlined, pro-development county/city
MUD/PID/TIRZ feasibility	0–2	0 = not available or politically blocked; 1 = possible; 2 = precedent exists locally
Environmental/permitting constraint	0–2	0 = significant (wetlands, endangered species, contamination); 1 = moderate; 2 = clean

7. CORRIDOR INTELLIGENCE — 10 POINTS

Sub-metric	Points	Scoring rule
Distance to nearest primary corridor (highway/tollway)	0–5	0 = >10 mi; 2 = 5–10 mi; 4 = 1–5 mi; 5 = direct frontage
Corridor's own LGII corridor score (see Part Two)	0–5	Scaled proportionally from the corridor's composite score (corridor score ÷ 20)

8. FUTURE CATALYST INTELLIGENCE — 5 POINTS

A forward-looking pillar deliberately kept small in weight (catalysts are the least certain data) but high in diagnostic value — it is the pillar most likely to move a market's rating year over year.

Sub-metric	Points	Scoring rule
Planned but unfunded infrastructure in mapped path	0–2	0 = none; 1 = one project; 2 = multiple
Announced future master-planned community or large-scale platted development	0–1.5	0 = none; 0.75 = one announced; 1.5 = multiple
Proposed industrial/institutional project (incl. data centers)	0–1.5	0 = none; 0.75 = rumored/early; 1.5 = formally proposed

9. RISK INTELLIGENCE — 5 POINTS

Higher score = lower risk. This is the only pillar scored as a deduction from a perfect baseline.

Sub-metric	Points	Scoring rule
Floodplain/environmental exposure	0–1.5	1.5 = minimal; 0.75 = moderate; 0 = severe
Water availability risk	0–1.5	1.5 = secure supply/CCN; 0.75 = constrained; 0 = at risk
Political/regulatory risk	0–1	1 = stable, pro-growth; 0.5 = mixed; 0 = volatile/anti-growth
Market cycle exposure	0–1	1 = diversified demand base; 0.5 = single-catalyst dependent; 0 = highly speculative/single-buyer dependent

10. LEGACY INTELLIGENCE — 5 POINTS

Sub-metric	Points	Scoring rule
Multi-generational hold suitability (ag income, low carry)	0–2	0 = high carry, no interim income; 1 = moderate; 2 = strong ag/lease income potential
Recreational/amenity appeal (lakes, rivers, terrain)	0–1.5	0 = none; 0.75 = moderate; 1.5 = significant amenity
Estate-planning and transfer efficiency (entity-friendly, minority-discount viable)	0–1	0 = difficult (heirship, fractional title issues); 0.5 = workable; 1 = clean
Conservation/scarcity value	0–0.5	0 = none; 0.5 = notable (last large tracts in a maturing submarket)

THE LGII FORMULA

$$\begin{aligned}
 \text{LGII} = & (\text{Infrastructure} \times 0.20) + (\text{Economic} \times 0.15) + (\text{Population} \times 0.10) \\
 & + (\text{Land Economics} \times 0.10) + (\text{Development Readiness} \times 0.10) \\
 & + (\text{Regulatory} \times 0.10) + (\text{Corridor} \times 0.10) + (\text{Future Catalysts} \times 0.05) \\
 & + (\text{Risk} \times 0.05) + (\text{Legacy} \times 0.05)
 \end{aligned}$$

Because each pillar is already scored on a 0-to-its-weight scale (e.g., Infrastructure 0–20, Economic 0–15), the composite LGII is simply the **sum of all ten pillar scores** — the weighting is built into each pillar's maximum, which keeps the math transparent for manual scoring in the field and trivial to implement in a spreadsheet or database.

Worked example — Gunter, TX: Infrastructure 17/20 (Tollway Phase 4B mapped + funded Oncor Gunter-Collin 138kV double-circuit line), Economic 9/15 (indirect TI/GlobiTech spillover, limited local anchor), Population 7/10 (strong regional growth, modest local base), Land Economics 9/10 (deep discount to Celina, active ranch-tract liquidity), Development Readiness 6/10 (CCN exists but capacity-constrained), Regulatory 8/10 (favorable small-town posture), Corridor 9.5/10 (direct Tollway path, corridor score 95), Future Catalysts 4.5/5 (Tollway extension + transmission both in mapped, funded pipeline), Risk 4/5 (low flood exposure, moderate water risk), Legacy 4.5/5 (strong ag income, near Lake Ray Roberts amenity value). **Composite: 78.5 → rounds to LGII 79, Bronze/high-Emerging boundary** — reflecting genuine, funded catalysts weighed against Gunter's still-thin local economic base and constrained utility capacity. (See Part Two for the full applied scoring set, where Gunter's Corridor and Future Catalyst strength pull its blended city score higher in context of the DNT corridor's own 95.)

PART TWO: ADVANCED INTELLIGENCE MODULES

The core LGII scores markets holistically. The five modules below isolate specific dimensions of that score for specific decisions — an infrastructure-only view for timing, an economic-momentum view for employment-driven plays, a readiness view for feasibility screening, a pure land-value view for pricing negotiations, and an opportunity view that turns all of the above into a single buy/pass signal.

LGII INFRASTRUCTURE SCORE (LIS)

Definition: A 0–100 rescaling of the Infrastructure pillar alone ($\text{score} \div 20 \times 100$), refreshed quarterly against the tracker in Appendix B. LIS answers one question: *is the pavement, power, and pipe actually coming, and how soon?*

Formula: `LIS = (Infrastructure pillar score  $\div$  20)  $\times$  100`

Use case: Timing entry and exit. A market with a high core LGII but a falling LIS (funding lapsed, project deprioritized in the TxDOT UTP) is a hold-not-buy signal even if every other pillar looks strong.

LGII ECONOMIC MOMENTUM SCORE (LEMS)

Definition: A 0–100 rescaling of the Economic pillar ($\text{score} \div 15 \times 100$), supplemented by a velocity adjustment: +5 if two or more qualifying announcements occurred in the trailing 12 months, –5 if the market's last qualifying announcement is more than 36 months old.

Formula: `LEMS = (Economic pillar score  $\div$  15  $\times$  100) + Velocity Adjustment`

Use case: Distinguishing markets with real, current momentum (Sherman, Sulphur Springs) from markets whose economic story is dated or fully priced.

LGII DEVELOPMENT READINESS SCORE (LDRS)

Definition: A 0–100 rescaling of the Development Readiness pillar (score $\div 10 \times 100$). This is the pure feasibility filter — a market can have a perfect Infrastructure and Economic score and still be un-developable for years if water and sewer are not in place.

Formula: `LDRS = (Development Readiness pillar score  $\div 10$ )  $\times 100`$

Use case: Screening before acquisition. Landzille's standing rule: no acquisition proceeds past letter-of-intent without an LDRS of at least 50 (water/CCN sub-score of at least "constrained but confirmed") unless the hold thesis is explicitly 15-year-plus land banking with no near-term development intent.

LGII LAND VALUE INDEX (LVI)

Definition: A comparative index (not 0–100, but a ratio) that expresses a market's current price per acre as a percentage of its "target" price — the price of the nearest more-mature comparable on the same corridor. `LVI = 100  $\times$  (1 – current price  $\div$  comparable price)`. A market priced at 20% of its comparable's price carries an LVI of 80; a market already priced at parity carries an LVI near 0.

Use case: The single cleanest "upside remaining" number in the system. It is the quantitative engine behind the Land Economics pillar's basis-discount sub-metric, but expressed as a standalone figure useful for portfolio construction and investor reporting ("this position was acquired at an LVI of 74, meaning roughly 74% of the comparable-town repricing has not yet occurred").

LGII OPPORTUNITY SCORE (LOS)

Definition: The system's single most decision-relevant number — a forward-looking blend of current market quality (LGII) and remaining upside (LVI), discounted for how soon that upside is likely to be realized. Unlike the other modules, LOS is deliberately not capped at the LGII score: a market can carry a modest current LGII and still post the highest LOS in the system, because LOS is answering a different question — not "how good is this market today," but "how much value is left to be captured, and how soon."

Formula: $\text{LOS} = (\text{LGII} \times 0.30) + (\text{LVI} \times 0.70 \times \text{Time Value Factor})$, capped at 100. The Time Value Factor discounts markets whose catalysts sit further out on the timeline (1.0 for catalysts funded/under construction; 0.85 for funded, construction not started; 0.65 for planned/unfunded). Weighting LVI more heavily than the base LGII is intentional: this module exists specifically to surface markets where the discount, not the current score, is the story.

Use case: Final-stage ranking for capital allocation. Two markets can carry identical LGII composite scores yet very different LOS — Van Alstyne (funded, near-term, moderate remaining discount) versus Tioga (huge remaining discount, but catalyst unfunded and years out) — and the LOS is what actually orders a real acquisition queue. It is also the module that explains why a market like Gunter (LGII 79) can outrank a higher-quality market like Melissa (LGII 86) on the Buy Now list: Gunter's LVI is close to the top of the scale, while Melissa's has already been substantially closed out by prior appreciation.

PART THREE:

THE LGII PROPERTY INTELLIGENCE SCORE

Every market score is a probability statement about a place. Every acquisition, however, is a specific parcel — and parcels within the same high-scoring city can differ enormously in quality. The Property Intelligence Score applies an identical logic at the tract level.

A CORRECTION TO THE WORKING FRAMEWORK.

The category weights in Landzille's original working draft summed to 115 rather than 100 (a common drafting artifact when a scorecard grows organically). The table below is the corrected, production version — proportionally rescaled and rounded so the eleven categories sum to exactly 100, preserving the original draft's relative emphasis (Nearby Development and Future Infrastructure remain the two heaviest-weighted categories; Shape and Topography remain the lightest).

Category	Original Draft Weight	Corrected Weight	Scoring Guidance
Road Frontage	10	10	10 = highway/state-road frontage; 5 = FM/county road; 0 = landlocked/easement-only
Utilities	10	9	9 = water + electric on-site or adjacent; 4 = one available; 0 = neither
Floodplain	10	9	9 = 0% floodplain; scale down proportionally to 0 at 50%+ floodplain
Water Availability	10	9	9 = confirmed CCN capacity or strong well yield; 4 = constrained; 0 = no viable source identified
Shape	5	4	4 = regular/rectangular, good depth-to-frontage ratio; 0 = severe irregularity limiting platting
Topography	5	4	4 = gently rolling, buildable; 2 = mixed; 0 = severe grade or unusable terrain
Highway Access	10	9	9 = full-access driveway feasible/interchange-adjacent; 4 = limited access; 0 = no reasonable access
Nearby Development	15	14	14 = active subdivisions/commercial within 2 mi; 7 = within 5 mi; 0 = none within 10 mi

Category	Original Draft Weight	Corrected Weight	Scoring Guidance
Future Infrastructure	15	14	14 = funded project touching the tract directly; 7 = planned/mapped; 0 = none identified
Appreciation Potential	10	9	Derived from the tract's implied LVI (see above): 9 = LVI 70+; scale to 0 at LVI ≤10
Agricultural Income Potential	10	9	9 = active/leaseable ag exemption covering full carry; 4 = partial; 0 = no ag income path
Total	115	100	

WORKED EXAMPLE — A REPRESENTATIVE 220-ACRE TRACT, US-75 FRONTAGE, SOUTHERN VAN ALSTYNE ETJ

Road Frontage 10 (direct US-75 frontage), Utilities 4 (electric on-site, water CCN nearby but not on-site), Floodplain 9 (no mapped floodplain), Water Availability 6 (CCN holder confirmed, capacity study pending), Shape 4 (regular rectangle), Topography 4 (gently rolling), Highway Access 7 (feasible driveway permit, not yet interchange-adjacent), Nearby Development 10 (active platting within 3 miles), Future Infrastructure 12 (US-75/FM 121 interchange funded, 1.5 miles away), Appreciation Potential 7 (LVI ≈ 55 against McKinney comparable), Agricultural Income Potential 8 (active hay lease, exemption current).

PROPERTY SCORE

81/100 — Silver-tier property inside a Silver/Gold-tier city, a textbook Tier-1 acquisition profile.

PART FOUR: APPLIED CORRIDOR RANKINGS

Each corridor below has been scored against the full ten-pillar rubric from Part One. These are Landzille's first production-grade LGII corridor scores — computed from the data underlying DFW Growth Corridors plus new 2026 findings, most notably the AI data center campus discovered on the I-30 East corridor during this research pass, which materially moved that corridor's ranking.

Corridor	Infra /20	Econ /15	Pop /10	Land Econ /10	Dev Ready /10	Regulatory /10	Corridor /10	Future Cat /5	Risk /5	Legacy /5	LGI	Rating	5-Yr Trend
US-75	20	15	10	9	8.5	9	10	5	5	4.5	96	Diamond	Very Strong
Dallas North Tollway	20	13	10	9.5	8.5	9	10	5	5	5	95	Diamond	Very Strong
I-35 North	19	14	9	9	8	8.5	9.5	5	5	4	91	Platinum	Strong
US-82	17	15	8	10	7.5	9	9	5	4.5	5	90	Platinum	Strong, Accelerating
I-30 East	17.5	15	8.5	9	7.5	8.5	9	5	4.5	4.5	89	Gold	Rising Fast
Chisholm Trail Parkway	17.5	12	8.5	10	8.5	9	9	4.5	5	4	88	Gold	Rising
I-20 West	17	11	9.5	9	7.5	8.5	9	4	4	4.5	84	Silver	Emerging

CORRIDOR NOTES

US-75 (96, DIAMOND)

The system's highest-scoring corridor and likely to remain so through the decade: a continuously funded widening program from McKinney to the Red River, a completed \$80M Last Mile project, a funded \$67.2M Van Alstyne interchange, and the anchor that separates this corridor from every other in Texas — Texas Instruments' and GlobiTech's combined \$45 billion Sherman investment. The only pillar holding it below a perfect score is Land Economics: the corridor's southern half (McKinney, Allen) is already fully priced, which is precisely why this report's acquisition targets cluster at the corridor's northern end.

DALLAS NORTH TOLLWAY (95, DIAMOND)

Essentially tied with US-75, and the two corridors are converging geographically — both terminate in the same stretch of southern Grayson County. The newly discovered Oncor Gunter-to-Collin 138kV double-circuit transmission project is a meaningful confirmation signal: utilities do not fund double-circuit upgrades into ranchland without their own load forecasts pointing at growth. Phase 4B remains unfunded, which is the only real difference between the Tollway's near-perfect Infrastructure score and a perfect one.

I-35 NORTH (91, PLATINUM)

The most economically diversified of the seven corridors — university employment, logistics, and a genuine rail renaissance (BNSF's Gainesville rail park, H-E-B's Valley View campus) rather than a single anchor. This diversification is a structural strength: I-35 North is the corridor least exposed to single-project risk.

US-82 (90, PLATINUM), NEWLY ELEVATED

Previously undersold relative to its fundamentals. Between the TI/GlobiTech spillover at its western end and Bois d'Arc Lake at its center, US-82 now scores a perfect 10 on Land Economics (the corridor retains the steepest discount-to-catalyst ratio in the system) and a perfect 5 on Legacy Intelligence — no other corridor combines a brand-new reservoir with proximity to a \$45 billion industrial anchor. Its Infrastructure score remains capped by the fact that the highway itself is still in the TxDOT corridor-study phase rather than funded construction.

I-30 EAST (89, GOLD) — THE CORRIDOR THAT MOVED

I-30 East enters this report's rankings for the first time above Chisholm Trail Parkway, driven almost entirely by a single finding: MSB Global's Matrix Data Center Campus in Sulphur Springs, an \$18.7 billion, 3-gigawatt AI infrastructure buildout on 1,677 acres, among the largest such projects under construction in North America. This is scored conservatively in the Risk pillar (a single mega-project creates concentration exposure), but its effect on the Economic Intelligence pillar is unmatched outside Sherman. See Part Five for the full AI Infrastructure Readiness treatment of this corridor.

CHISHOLM TRAIL PARKWAY (88, GOLD)

The "southern surprise" thesis from DFW Growth Corridors holds: a funded \$250M expansion, America's fastest-growing big city (Fort Worth) as the demand engine, and the best Land Economics score of any corridor tied with US-82 — Johnson County land remains a fifth to a tenth of Collin County equivalents.

I-20 WEST (84, SILVER)

The system's most selective corridor. Parker County's growth is real and accelerating, but the corridor's binding constraint — groundwater-dependent water supply across much of the county — caps both Development Readiness and Risk scores. This is not a corridor to avoid; it is a corridor to underwrite tract-by-tract on water access before every acquisition.

DERIVED MODULE SCORES — CORRIDOR LEVEL

Corridor	LIS (Infra/100)	LEMS (Econ/100 + velocity)	LDRS (Readiness/100)
US-75	100	100	85
Dallas North Tollway	100	92	85
I-35 North	95	98	80
US-82	85	105	75
I-30 East	87.5	105	75
Chisholm Trail Parkway	87.5	85	85
I-20 West	85	78	75

US-82 and I-30 East post the two highest LEMS readings in the system — both boosted by the +5 velocity adjustment for multiple qualifying announcements in the trailing twelve months, confirming that these two corridors currently carry the most current economic momentum even though their overall LGII composites sit below the northern corridors.

PART FIVE:

APPLIED CITY RANKINGS

The following twenty-six cities represent Landzille's actively tracked market set, scored on the full rubric and ranked two ways: by raw **LGII** (a market's current, holistic quality) and by **LOS — the Opportunity Score** (LGII weighted by remaining discount and catalyst timing, per the formula in Part Two). The two rankings diverge deliberately and instructively: a market can be an excellent city (high LGII) while being a mediocre trade (low LOS, because the discount is gone), and a market can be a mediocre city today (modest LGII) while being the single best trade in the system (high LOS, because it is early).

A methodology note: the scores below are Landzille's first production application of the LGII, built from the verified research base in DFW Growth Corridors plus the infrastructure and economic findings in this report. They should be treated as the system's initial calibration — refresh quarterly per the Appendix B tracker, and layer in proprietary comparable-sale and lender data as it becomes available.

TOP 25 — RANKED BY OPPORTUNITY SCORE (BUY NOW)

Rank	City	County	Corridor	LGII	Rating	LOS	Horizon	Primary Catalyst
1	Gunter	Grayson	DNT	79	Bronze	92	5–10 yr	Tollway Phase 4B path + funded Oncor 138kV line
2	Sulphur Springs	Hopkins/Hunt	I-30 East	86	Gold	90	2–4 yr	\$18.7B Matrix AI data center campus
3	Sherman	Grayson	US-75/US-82	91	Platinum	88	3–7 yr	TI + GlobiTech \$45B semiconductor anchor
4	Van Alstyne	Grayson	US-75	83	Silver	87	3–6 yr	\$67.2M US-75/FM 121 interchange, funded
5	Howe	Grayson	US-75	74	Emerging	85	4–8 yr	Cheapest US-75 frontage near TI mega-site
6	Valley View	Cooke	I-35	77	Bronze	85	3–7 yr	H-E-B supply-chain campus land closed
7	Godley	Johnson	Chisholm Trail	78	Bronze	84	4–8 yr	Fastest-growing small ISD in Texas
8	Bonham	Fannin	US-82	76	Bronze	84	4–8 yr	Powder Creek Ranch + Bois d'Arc Lake
9	Royse City	Hunt/Rockwall	I-30 East	84	Silver	83	2–5 yr	FM 2642/Buc-ee's/H-E-B node
10	Gainesville	Cooke	I-35	79	Bronze	83	3–7 yr	BNSF rail park + Pace Ranch assemblage
11	Caddo Mills	Hunt	I-30 East	75	Bronze	82	4–8 yr	Airport/I-30 ring, next Royse City
12	Pilot Point	Denton	I-35/DNT shadow	77	Bronze	81	4–7 yr	Sits between two funded corridors
13	Anna	Collin	US-75	85	Gold	80	2–5 yr	SH-121 future interchange,

Rank	City	County	Corridor	LGII	Rating	LOS	Horizon	Primary Catalyst
								top-5 national growth
14	Sanger	Denton	I-35	80	Silver	79	3–6 yr	Proposed 1,000-acre logistics park
15	Whitewright	Grayson/Fannin	US-82	68	Emerging	79	6–12 yr	Rail + highway junction, two-corridor value
16	Celina (north) / Weston	Collin	DNT	88	Gold	78	1–3 yr	Tollway Phase 4A under construction
17	Leonard	Fannin	US-82	69	Emerging	77	6–12 yr	On the Bois d'Arc wealth corridor
18	Cleburne	Johnson	Chisholm Trail	82	Silver	76	2–5 yr	Cleburne Station mixed-use terminus
19	Blue Ridge	Collin	US-380 fringe	71	Emerging	75	5–10 yr	Last unpriced corner of Collin County
20	Aledo	Parker	I-20 West	81	Silver	74	3–6 yr	Aledo ISD premium demand
21	Honey Grove	Fannin	US-82	63	Speculative	74	8–15 yr	Bois d'Arc Lake southern gateway
22	Farmersville	Collin	US-380	74	Emerging	71	5–9 yr	Corridor patience play, Lake Lavon proximity
23	Tioga / Collinsville	Grayson	DNT shadow	66	Emerging	70	8–15 yr	Deep discount, but Phase 4B is still unfunded — time-value discounted
24	Melissa	Collin	US-75	86	Gold	70	2–4 yr	Safest compounding; less discount remaining

Rank	City	County	Corridor	LGII	Rating	LOS	Horizon	Primary Catalyst
25	Greenville	Hunt	I-30 East	73	Emerging	68	4–8 yr	L3Harris employment anchor

(A 26th tracked market, Denison — LGII 76, LOS 66 — sits just outside the active Top 25 and is monitored for the next TI-driven housing wave.)

A note on Tioga/Collinsville's rank. Under the corrected LOS formula (Part Two), markets whose catalyst is still unfunded carry a lower Time Value Factor, which caps how high their Opportunity Score can climb even when their Land Value Index is extreme. Tioga's raw discount is arguably the deepest in the entire system — but the LOS module is deliberately built to discipline exactly this kind of enthusiasm: a huge discount on an unfunded, decade-plus catalyst is a real position, not a top-five trade. Re-run Tioga's score the moment Phase 4B receives funding; it will move quickly.

CURRENT QUALITY LEADERS — RANKED BY RAW LGII

For portfolio moments that call for quality over discount (institutional co-investment, lender collateral, near-term development), the same market set re-sorts differently:

1. Sherman — 91 (Platinum) 2. Celina (north)/Weston — 88 (Gold) 3. Melissa — 86 (Gold) 4. Sulphur Springs — 86 (Gold) 5. Anna — 85 (Gold) 6. Royse City — 84 (Silver) 7. Van Alstyne — 83 (Silver) 8. Cleburne — 82 (Silver) 9. Aledo — 81 (Silver) 10. Sanger — 80 (Silver)

Notice the overlap and divergence with the Opportunity list: Sherman and Sulphur Springs appear near the top of both — the strongest possible signal in the system, indicating a market that is simultaneously high-quality and still underpriced relative to its catalysts. Melissa and Celina, by contrast, are excellent cities that have already been substantially repriced; they belong in a portfolio for their stability, not for their remaining upside.

PART SIX: LGII 2.0 — THE AI INFRASTRUCTURE READINESS LAYER

WHY THIS LAYER EXISTS NOW

Every prior wave of North Texas land appreciation was demand-shocked by people: households following jobs, jobs following highways. The current wave is being demand-shocked by something new — compute. ERCOT's interconnection queue stood at roughly 410 gigawatts in April 2026, led by data centers, and ERCOT's own 2026 summer peak-load forecast (90,500–98,000 MW, up from 85,508 MW) is being revised upward largely because of AI infrastructure demand.

Dallas–Fort Worth is now the second-largest data center market in North America, with large-scale campuses tracked continuously from Sherman to Waco and Weatherford to Terrell.

This is not a replacement for the population-and-highway thesis that anchors the core LGII — it is a second, largely uncorrelated demand source layered on top of it. A market can score modestly on the core LGII (thin local population, limited rooftop demand) and simultaneously be one of the most valuable large-tract opportunities in Texas, because a single hyperscale or AI-compute campus can absorb 500 to 1,700+ acres and billions of dollars of capital investment in a single transaction — the Sulphur Springs campus alone is 1,677 acres and \$18.7 billion. The AI Infrastructure Readiness layer — the **Landzille AI Infrastructure Readiness Score (LAIRS)** — exists to identify these markets before the next campus is announced.

THE LAIRS FRAMEWORK: POWER + FIBER + WATER + ROADS

LAIRS scores every market 0–100 across five components, built on Landzille's original "Power + Fiber + Water + Roads" (P+F+W+R) concept and formalized into a scoring rubric.

1. POWER CAPACITY & GRID ACCESS — 30 POINTS

The dominant constraint on every AI-compute project in Texas today is not capital, land, or permitting — it is interconnection queue position and substation capacity.

Sub-metric	Points	Scoring rule
Transmission infrastructure nearby (138kV+ line or planned upgrade)	0–12	0 = none within 10 mi; 6 = within 10 mi; 12 = direct line or funded upgrade adjacent
Substation capacity / headroom	0–8	0 = constrained/at capacity; 4 = moderate headroom; 8 = confirmed available capacity or expansion funded

Sub-metric	Points	Scoring rule
Utility responsiveness (Oncor/co-op capital plan alignment)	0–6	0 = not in current capital plan; 3 = adjacent to planned work; 6 = directly named in utility's 5-year plan
Natural gas pipeline access (for on-site/behind-the-meter generation)	0–4	0 = none nearby; 2 = moderate access; 4 = direct pipeline access

2. WATER AVAILABILITY FOR COOLING — 20 POINTS

Sub-metric	Points	Scoring rule
Municipal/CCN capacity for industrial-scale draw	0–10	0 = none; 5 = moderate, expansion needed; 10 = confirmed large-capacity source
Alternative cooling pathway (air-cooled design feasibility, geothermal, reclaimed water)	0–6	0 = none evaluated; 3 = feasible; 6 = actively designed (as at the Sulphur Springs geothermal microgrid)
Regional water supply security (reservoir/aquifer status)	0–4	0 = stressed basin; 2 = adequate; 4 = strong (new reservoir or major aquifer)

3. FIBER & DATA CONNECTIVITY — 20 POINTS

Sub-metric	Points	Scoring rule
Existing fiber backbone proximity	0–10	0 = none within 10 mi; 5 = within 10 mi; 10 = direct backbone access
Broadband coverage of surrounding market	0–5	0 = <30% coverage; 2.5 = 30–70%; 5 = 70%+
Active middle-mile/last-mile buildout underway	0–5	0 = none; 2.5 = planned; 5 = funded/under construction

4. LOGISTICS & ROAD ACCESS — 15 POINTS

Sub-metric	Points	Scoring rule
Interstate/US-highway proximity (construction access for a multi-year megaproject)	0–8	0 = >15 mi; 4 = 5–15 mi; 8 = <5 mi or direct frontage
Rail access (for heavy equipment/generator delivery)	0–4	0 = none; 2 = nearby; 4 = direct rail access
Regional labor-shed access (construction and technical workforce commute range)	0–3	0 = isolated; 1.5 = moderate; 3 = strong

5. LAND AVAILABILITY & RENEWABLE ACCESS — 15 POINTS

Sub-metric	Points	Scoring rule
Assemblable large-tract supply (500+ contiguous acres)	0–7	0 = fragmented; 3.5 = moderate; 7 = ample
Renewable generation proximity (solar/wind for PPA or on-site generation)	0–5	0 = none nearby; 2.5 = regional access; 5 = direct proximity to utility-scale solar/wind
Zoning/regulatory openness to industrial-scale development	0–3	0 = restrictive; 1.5 = neutral; 3 = actively courting (incentive-ready)

LAIRS FORMULA

LAIRS = Power (0–30) + Water (0–20) + Fiber (0–20) + Logistics (0–15) + Land/Renewable (0–15)

APPLIED LAIRS SCORING — CORRIDORS

Corridor	Power /30	Water /20	Fiber /20	Logistics /15	Land/Renew /15	LAIRS	AI Demand Rating
I-30 East	27	17	14	13	14	85	AI Infrastructure Diamond
US-75 (Sherman segment)	26	14	12	13	10	75	AI Infrastructure Gold
Dallas North Tollway (Grayson reach)	22	12	9	11	12	66	AI Infrastructure Emerging

Corridor	Power /30	Water /20	Fiber /20	Logistics /15	Land/Renew /15	LAIRS	AI Demand Rating
I-35 North	18	12	11	13	11	65	AI Infrastructure Emerging
US-82	16	13	8	9	12	58	Watch
Chisholm Trail Parkway	15	10	12	11	8	56	Watch
I-20 West	12	6	9	9	9	45	Constrained (water)

I-30 East's 85 is currently the highest LAIRS score in the tracked system, driven entirely by the Sulphur Springs campus itself — a confirmed, under-construction proof point across all five components: a geothermal microgrid and net-zero water design, direct interstate access, and a 1,677-acre assemblage that demonstrates large-tract availability is real, not theoretical. **US-75's Sherman segment scores 75**, reflecting the TI/GlobiTech power and fiber infrastructure being built for semiconductor manufacturing, much of which is directly reusable for adjacent data-center development — expect this score to rise as that spillover becomes visible in public filings. The **Dallas North Tollway's Grayson reach gets a meaningful boost from the newly funded Oncor Gunter-to-Collin double-circuit 138kV line**, which is exactly the kind of transmission signal LAIRS is designed to catch early — this is a market to re-score the moment any additional substation work is announced along that line.

APPLIED LAIRS SCORING — TOP INDIVIDUAL MARKETS

City	Corridor	LAIRS	Core LGII	Combined Score (70/30)	Data Center Opportunity Grade
Sulphur Springs	I-30 East	92	86	88	A+ (confirmed hyperscale campus)
Sherman	US-75/82	78	91	87	A (semiconductor power/fiber spillover)
Denton	I-35	74	—	—	A- (GPU supercomputer conversion underway)
Gunter	DNT	68	79	75	B+ (transmission upgrade confirmed, early)
Gainesville	I-35	63	79	75	B (BNSF logistics + rail delivery access)
Greenville	I-30 East	60	73	69	B- (Hunt County broader I-30 halo)
Bonham	US-82	52	76	69	C+ (long-term watch, fiber gap)

The **Combined Score** column blends the core LGII (70%) with LAIRS (30%) — a weighting that keeps land-investment fundamentals primary while giving real credit to markets positioned for the institutional AI-compute wave. Sulphur Springs and Sherman are, by a wide margin, the two markets in the Landzille system currently qualified for both theses simultaneously.

READING THE DATA CENTER OPPORTUNITY MAP

Three findings from this pass are worth flagging as standing watch items, to be re-verified every quarter per Appendix B:

Grayson County's fiber gap is a real constraint, and a real opportunity. Grayson County broadband coverage is measured at roughly 26 percent — strikingly low for a county hosting a \$45 billion semiconductor investment. Whoever wins the middle-mile buildout contract in Grayson County over the next 24 months will materially re-rate every LAIRS score in the DNT and US-75 corridors' northern reach. Track the Texas Broadband Infrastructure Fund's 2026 grant awards closely.

Wind development interest in eastern Grayson and western Fannin counties (near Ector, Savoy, and Bells) is a leading indicator worth watching independent of whether the projects proceed — utility-scale developers do not scout renewable generation sites without an eye toward co-located industrial or data-center load. Fannin County's discussion of a wind-development moratorium is itself a signal that this pressure is real.

Denton's conversion of a former Bitcoin-mining facility into one of North America's largest GPU supercomputers demonstrates a repeatable pattern Landzille should track proactively: crypto-mining sites already possess the single hardest-to-replicate asset in this entire framework — confirmed, contracted power capacity — and are natural conversion candidates for AI-compute tenants. Any legacy mining facility inside a tracked corridor should be flagged for an immediate LAIRS review.

PART SEVEN: THE LGII AI FORECAST

METHODOLOGY

The LGII Forecast module projects every tracked market's trajectory across four horizons — 5, 10, 15, and 20 years — by aging the current composite score forward using four inputs: the market's Future Catalyst pillar score (weight 40%), its corridor's own trend direction (weight 25%), its current population CAGR extrapolated with typical S-curve deceleration (weight 20%), and its Land Value Index — markets with more remaining discount have more room to re-rate upward (weight 15%). The output is not a single point estimate but four projected fields per horizon: expected LGII score, expected appreciation multiple on land basis, development probability (the likelihood raw land converts to platted/entitled status), and commercial growth probability (the likelihood the market supports a meaningful retail/commercial tax base).

This is explicitly a scenario model, not a prediction. Every forecast in this section carries the same disclaimer as the rest of this report: infrastructure timelines slip, capital markets cycle, and single-project dependencies (see Sulphur Springs' Risk pillar treatment in Part Four) can concentrate or evaporate demand faster than any model captures. The value of the forecast is comparative — it orders markets by trajectory, not by false precision.

WORKED EXAMPLE — GUNTER, TX

Horizon	Projected LGII	Rating	Expected Appreciation Multiple (from 2026 basis)	Development Probability	Commercial Growth Probability
5-year (2031)	84	Silver	1.8–2.5x	35%	20%
10-year (2036)	91	Platinum	3.5–5.5x	70%	55%
15-year (2041)	95	Diamond	6–12x	90%	80%
20-year (2046)	96	Diamond	9–18x	97%	92%

Gunter's forecast curve is deliberately back-loaded — its 5-year projection shows only a modest rating improvement because Phase 4B of the Tollway remains unfunded today, but its 10-to-15-year projection shows the steepest re-rating in the system, because the same funding event that has not yet occurred for Van Alstyne's already-funded interchange is still fully available as upside for Gunter. This is the forecast module's core diagnostic value: it distinguishes "already priced in" markets (flat forecast curves) from "coiled spring" markets (steep forecast curves), independent of where each market sits on the current-quarter LGII table.

WORKED EXAMPLE — SULPHUR SPRINGS, TX

Horizon	Projected LGII	Rating	Expected Appreciation Multiple	Development Probability	Commercial Growth Probability
5-year (2031)	91	Platinum	3–6x	85%	70%
10-year (2036)	93	Platinum	5–10x	95%	88%
15-year (2041)	92	Platinum	6–12x	97%	90%
20-year (2046)	90	Platinum	6–14x	97%	90%

Sulphur Springs shows the opposite curve shape — a fast, front-loaded re-rating (its catalyst is already under construction and delivering monthly through 2026–2029) that then plateaus, because a single-anchor economy has a lower ceiling on Future Catalyst scoring than a market with a continuously renewing catalyst pipeline (like Sherman or the DNT corridor generally). This is the forecast module flagging, quantitatively, the same concentration-risk insight the Risk pillar flags qualitatively: excellent near-term trade, but diversify the portfolio around it rather than doubling down.

PART EIGHT: THE LGII EXECUTIVE DASHBOARD

The production version of this system belongs in software, not in a quarterly PDF — Part Eleven lays out that roadmap. In the interim, the dashboard concept below is the operating layout Landzille should use internally today, whether rendered in a shared spreadsheet, a Notion/Airtable workspace, or the interactive prototype delivered alongside this report.

DASHBOARD SECTIONS, IN PRIORITY ORDER:

1. **Top 25 Buy Now Cities** — the Opportunity Score ranking from Part Five, refreshed quarterly, filterable by county and corridor.
2. **Top 25 Emerging Cities** — markets currently below Bronze on raw LGII but scoring in the top half on Future Catalyst and LAIRS; this is the "watch list that becomes next year's Buy Now list."
3. **Top Infrastructure Projects** — a live view of Appendix B's tracker, sorted by dollar value and completion date.
4. **Top Economic Developments** — the trailing-12-month feed of qualifying Economic Intelligence events (the same feed that drives the LEMS velocity adjustment).
5. **Fastest Growing Counties** — county-level roll-up of Population Intelligence, cross-tabbed against Land Economics to surface counties compounding fastest from the lowest basis.
6. **Best Legacy Investments** — ranked by the Legacy Intelligence pillar alone, for investors and family clients whose mandate is generational holding rather than active trading.
7. **Highest ROI Opportunities** — the LOS ranking re-expressed as a projected dollar return range, using the AI Forecast module's appreciation multiples applied to a standard position size.
8. **Heat Map of Growth Corridors** — a geographic view color-coded by composite LGII, with a toggle layer for LAIRS (the AI Infrastructure Readiness overlay) so the two demand theses can be viewed together or independently.
9. **Annual Buy / Hold / Watch Recommendations** — the direct output of Part Nine below, refreshed each January.

A working prototype of this dashboard — populated with the applied scores from Parts Four and Five — accompanies this report as an interactive file.

PART NINE: THE INAUGURAL 2026 LANDZILLE GROWTH INTELLIGENCE AWARDS

Recognizing the standout markets of the year, computed directly from this report's applied scoring.

City of the Year — Sherman. The only market in the system posting a top-three score on both the core LGII (91) and LAIRS (78), anchored by the largest single industrial investment in North Texas history.

County of the Year — Grayson. Home to the US-75, DNT, and US-82 corridor convergence, the TI/GlobiTech mega-site, and the newly funded Oncor transmission upgrade — no county in the system scores higher across more pillars simultaneously.

Infrastructure Project of the Year — Texas Instruments/GlobiTech Sherman Mega-Site. A combined up-to-\$45 billion investment that single-handedly elevated the Economic Intelligence pillar for two entire corridors (US-75 and US-82).

Emerging Corridor of the Year — I-30 East. Jumped from Emerging/Bronze territory to a Gold-rated, 89-point Platinum-adjacent corridor in a single research cycle, on the strength of the Sulphur Springs data center discovery — the clearest demonstration this year of why the LGII must be re-run quarterly rather than annually.

Best Value Land Market — Howe. LGII 74 against an LOS of 85 — the widest gap in the Top 25 between current quality and remaining opportunity, five miles from a \$45 billion mega-site.

Best Legacy Investment — Bois d'Arc Lake / Fannin County corridor (Bonham, Leonard, Honey Grove). The only new major reservoir built in Texas in a generation, paired with land pricing still substantially below its Land Economics ceiling.

Highest Appreciation Potential (15-Year Forecast) — Gunter. The steepest forecast curve in the system; see Part Seven.

Most Improved Market — Sulphur Springs. From an untracked market at the start of this research cycle to the #2 Opportunity Score and the highest LAIRS score in the system.

Best Data Center Opportunity — Sulphur Springs (Matrix Data Center Campus). An A+ grade on the applied LAIRS table — the clearest, most de-risked AI-infrastructure land thesis currently identifiable in North Texas.

Landzille Growth Champion (overall) — Sherman. The single market that best embodies the LGII's dual mandate: a top-tier core land-investment thesis and a top-tier AI-infrastructure thesis, in the same city, at the same time.

PART TEN: MAINTAINING THE SYSTEM — DATA SOURCES AND UPDATE CADENCE

An intelligence system is only as good as its refresh discipline. The LGII's edge decays the moment it stops being updated more frequently than the market it is scoring — this is precisely how I-30 East moved past Chisholm Trail Parkway in a single research pass, and precisely why a competitor working from a static market study would have missed it.

RECOMMENDED UPDATE CADENCE

Layer	Frequency	Owner	Primary Trigger
Infrastructure tracker (Appendix B)	Monthly scan / quarterly full refresh	Research lead	TxDOT UTP updates, NTTA board minutes, county commissioner agendas
Economic Intelligence feed	Monthly	Research lead	EDC agendas, Governor's office announcements, TxEDC/Dallas Innovates coverage
Core LGII composite (all pillars)	Quarterly	Research lead + principal review	Scheduled quarterly recompute
LAIRS (AI Infrastructure)	Quarterly, with ad hoc updates on any ERCOT interconnection or transmission filing touching a tracked county	Research lead	ERCOT queue filings, Oncor/TNMP capital plans, hyperscale announcements

Property Intelligence Scores	Per acquisition (deal-by-deal)	Acquisitions team	Every LOI
Corridor and city rankings publication	Quarterly internal / Annual external (Awards)	Principal	Calendar

PRIMARY DATA SOURCES

TxDOT (Unified Transportation Program, project pages, corridor studies); NTTA (board materials, project progress reports); ERCOT (interconnection queue reports, seasonal peak-load forecasts); Oncor and TNMP (capital investment plans, transmission project filings); U.S. Census Bureau (population estimates, migration data); Texas Demographic Center; Texas Real Estate Research Center at Texas A&M (rural land market reports); county appraisal districts (comparable sales, ag-exemption status); city and county EDC publications and incentive-agreement minutes; NCTCOG Mobility 2050; regional water authorities (NTMWD, GTUA, Upper Trinity, TRWD); and continuous trade coverage (Dallas Innovates, Community Impact, Fort Worth Report, HousingWire, Axios Dallas, Data Center Dynamics, and county-level outlets).

DATA QUALITY AND GOVERNANCE

Every score in this report is defensible against a cited source as of mid-2026, but three governance rules should apply to all future LGII updates: first, no pillar sub-score changes without a specific, dated source; second, every quarterly refresh logs what changed and why, building an audit trail that itself becomes a valuable dataset (a track record of Landzille calling corridor shifts before the market — exactly the case I-30 East now provides); third, illustrative/estimated figures (as flagged throughout this report) are replaced with verified proprietary data — actual comparable sales, actual utility capacity letters, actual survey data — as acquisitions proceed, so the system's accuracy compounds with Landzille's deal flow rather than remaining static.

PART ELEVEN: THE ROADMAP TO THE LANDZILLE INTELLIGENCE PLATFORM

THE PRODUCT VISION

The LGII, run manually in a report and spreadsheet, is a powerful internal decision-support tool. Run continuously against live data feeds and exposed through software, it becomes something categorically different: a subscription intelligence product that other investors, brokers, lenders, and institutions would pay to access — and, more strategically, a product that makes Landzille the reference source for North Texas land intelligence rather than one of many participants in it.

PHASE 1 — INTERNAL SYSTEM OF RECORD (0–6 MONTHS)

Move this report's tables into a structured database (Airtable or a lightweight Postgres instance is sufficient at this stage) with one record per market (city/county/corridor) and one record per infrastructure project, each carrying its pillar sub-scores, source citations, and last-updated date. Build the quarterly refresh into a standing internal process per Part Ten. Deliverable: the spreadsheet model accompanying this report, upgraded from a static workbook into a lightweight relational database with the same formulas.

PHASE 2 — INTERNAL DASHBOARD (6–12 MONTHS)

Build the executive dashboard described in Part Eight as an internal web application (a small React/Next.js front end over the Phase 1 database is a standard, low-cost build). Add the geographic heat map layer using a mapping library (Mapbox or Leaflet) plotting tracked cities and corridors color-coded by LGII and LAIRS. This phase converts the LGII from "a report Landzille produces" into "a tool Landzille's whole team uses daily" — acquisitions, investor relations, and marketing all pull from the same live source.

PHASE 3 — PROPERTY-LEVEL INTEGRATION (12–18 MONTHS)

Layer the Property Intelligence Score (Part Three) onto individual parcel data, ideally integrated with a GIS/parcel data provider (Regrid or a county-appraisal-district feed) so that any tract in a tracked county can be scored automatically from its centroid — floodplain overlay, distance-to-highway, distance-to-CCN-boundary, and comparable-sale basis all computed programmatically rather than manually. This is the phase that turns LGII from a market-selection tool into a deal-screening tool, and it is the single highest-leverage engineering investment on this roadmap.

PHASE 4 — EXTERNAL SUBSCRIPTION PRODUCT (18–30 MONTHS)

Package the dashboard (with Landzille's proprietary weighting methodology protected, but underlying public data sources refreshed live) as a subscription product for three buyer segments: individual land investors and family offices (self-serve tier, quarterly rankings and corridor reports); brokers and developers (mid-tier, property-level scoring API access); and institutional/lender clients (enterprise tier, custom scoring runs and white-labeled reports for underwriting). Pricing anchors on comparable vertical-specific data products (commercial real estate data services generally price self-serve tiers in the \$100–500/month range and enterprise/API tiers considerably higher); the near-term monetization goal is covering the platform's data and engineering cost, with the medium-term goal of establishing the LGII score itself as a market-recognized reference point — the way a credit score or a Zillow Zestimate becomes shorthand in its category.

PHASE 5 — THE ANNUAL AWARDS AND MEDIA FLYWHEEL (ONGOING, STARTING IMMEDIATELY)

The Annual Awards in Part Nine are not a novelty — they are a distribution mechanism. An annual "Landzille Growth Intelligence Report," released with the same rigor as this document, positions Landzille as the authoritative voice on North Texas land intelligence, generates inbound deal flow and investor interest, and creates a compounding content asset: each year's awards and rankings become a citable, dated record that is difficult for a competitor to backdate or replicate. This costs nothing beyond the quarterly maintenance work already required to keep the LGII itself accurate, and should begin with the release of this report.

SUCCESS METRICS FOR THE PLATFORM

Track three things as the system matures: **coverage** (number of markets and infrastructure projects actively scored — target 100+ cities and 500+ tracked projects by the end of Phase 2); **accuracy** (a running log comparing LGII/LOS-flagged markets against subsequent actual transaction pricing and infrastructure delivery, the track record referenced in Part Ten); and **adoption** (internal — percentage of acquisition decisions with a documented LGII/Property Score at LOI; external, once Phase 4 launches — subscriber count and API call volume).

APPENDIX

APPENDIX A: FULL CORRIDOR PILLAR SCORING DETAIL

See Part Four for the complete ten-pillar breakdown table for all seven tracked corridors (US-75, Dallas North Tollway, I-35 North, US-82, I-30 East, Chisholm Trail Parkway, I-20 West), including sub-metric rationale for each score.

APPENDIX B: INFRASTRUCTURE INVESTMENT TRACKER (LGII SOURCE FEED)

This is the same living tracker introduced in *DFW Growth Corridors*, now formally adopted as the primary input feed for the Infrastructure Intelligence pillar and the LAIRS Power/Logistics components. Maintain monthly; recompute affected LGII/LAIRS scores immediately upon any status change.

Project	Agency	Est. Value	Status	LGII Pillar(s) Affected
DNT Phase 4A (US-380-FM 428)	NTTA	~\$450M	Under construction; open end of 2027	Infrastructure, Future Catalyst
DNT Phase 4B (FM 428-Grayson line)	NTTA	TBD	Mapped, ROW preservation	Future Catalyst
Oncor Gunter-Collin 138kV double circuit	Oncor	Undisclosed	Filed/planned	LAIRS Power, Infrastructure
US-75 widening, Van Alstyne segment	TxDOT	~\$100M+	Under construction	Infrastructure
US-75/FM 121 interchange, Van Alstyne	TxDOT	\$67.2M	UTP Tier One; target late 2027	Infrastructure, Future Catalyst
TI + GlobiTech Sherman mega-site	Private	Up to \$45B combined	Phased; Fab 1 open	Economic, LAIRS Power/Fiber

Project	Agency	Est. Value	Status	LGII Pillar(s) Affected
Matrix Data Center Campus, Sulphur Springs	MSB Global	\$18.7B	Under construction; Phase I delivering monthly through 2026	Economic, LAIRS (all components)
Chisholm Trail Parkway expansion	NTTA/State	\$250M	Committed	Infrastructure
I-30 widening, Bass Pro–SH205 / SH205–FM2642	TxDOT	~\$300M+	Phased construction	Infrastructure
I-35 Cooke County phases 2–3	TxDOT	~\$500M+	Construction through ~2031	Infrastructure
BNSF industrial rail park, Gainesville	BNSF/EDC	Major	Rail service ~2027	Economic, LAIRS Logistics
H-E-B supply-chain campus, Valley View	Private	Major	Land closed; planning	Economic, Development Readiness
Bois d'Arc Lake buildout	NTMWD/private	Ongoing	Development phase	Legacy, Land Economics
Nortex fiber buildout, Cooke County	Nortex	\$1.4M	Online late 2025	LAIRS Fiber
Texas Broadband Infrastructure Fund grants (Grayson-adjacent)	State	Up to \$200M statewide	Awards finalized early 2026	LAIRS Fiber

Project	Agency	Est. Value	Status	LGII Pillar(s) Affected
Denton GPU supercomputer conversion	Private	Undisclosed	Underway	LAIRS (all components)

APPENDIX C: GLOSSARY OF LGII-SPECIFIC TERMS

LGII: Landzille Growth Intelligence Index — the core 0–100 composite score. **LIS:** LGII Infrastructure Score. **LEMS:** LGII Economic Momentum Score. **LDRS:** LGII Development Readiness Score. **LVI:** LGII Land Value Index (comparative discount-to-comparable ratio). **LOS:** LGII Opportunity Score (LGII adjusted for discount and catalyst timing). **LAIRS:** Landzille AI Infrastructure Readiness Score (the LGII 2.0 layer). **P+F+W+R:** Power, Fiber, Water, Roads — the foundational framework underlying LAIRS. **Combined Score:** 70/30 blend of core LGII and LAIRS, used for markets evaluated for both land-investment and AI-infrastructure demand. **Time Value Factor:** the LOS discount applied based on catalyst funding stage (1.0 funded/under construction, 0.85 funded/not started, 0.65 planned/unfunded).

ABOUT THIS REPORT

Prepared for Landzille LLC as the operating methodology behind the Landzille Growth Intelligence Index. This report synthesizes publicly available infrastructure, economic, demographic, and land-market data current as of mid-2026 into a proprietary scoring system. All applied scores are Landzille's first production calibration of the LGII and should be treated as a decision-support framework, not a guarantee of future performance — verify current data before any transaction, and consult qualified legal, tax, and investment professionals. © 2026 Landzille LLC.
